

LUCAS CUNHA

Senior Full-Stack Engineer · TypeScript, React, Node · AWS · AI Agents

lucascmir@gmail.com | lucas-cunha.com | linkedin.com/in/lucmir | github.com/lucmir | Belo Horizonte, Brazil

EXPERIENCE

Senior Full-Stack Engineer · Civic Technologies

04/2025 – Present

- Build Civic MCP end to end (TypeScript, Node.js): an AI agent security control plane on Model Context Protocol, connecting agents to 95+ enterprise tools with guardrails, audit logging, and secure credential management.
- Bryn: full-stack build of a signal-based GTM product (Next.js/React front end, Node.js services, PostgreSQL) where LLM-powered agents identify company visitors, enrich and score intent signals, and trigger automated plays into Slack and CRM.
- Design the Bryn enrichment pipeline: agent orchestration combining LLM calls with third-party data providers, with evals and observability built in. Own the analytics pipeline (Kinesis → Lambda → Redshift).
- Also lead cloud infrastructure across Civic products (AWS/EKS, GitOps, CI/CD, observability, incident response), so every feature ships with the full deploy and reliability story.

Full-Stack Engineer · Civic Technologies

11/2018 – 04/2025 (6.5 yrs)

- Full-stack delivery across Civic's identity products: React/Next.js front ends, TypeScript and Node.js services, and AWS serverless back ends.
- Civic Auth: built a complete identity and authentication platform (OAuth 2.0, OIDC) on Next.js and React.
- Civic Pass: shipped on-chain identity credentials on Solana and EVM chains, scaling to 1M+ passes issued.
- Civic Wallet: built APIs for crypto wallet and payments (Node.js, Serverless, AWS Lambda).

Developer Consultant · ThoughtWorks

06/2016 – 11/2018 (2.5 yrs)

- Designed a Digital API-management Platform (Kong, Rails, Node.js, GCP, Kubernetes) for secure, scalable cross-team API consumption.
- Developed a staffing system (React/Redux, Rails, AWS); led technical decisions, mentoring, and delivery quality.

Software Engineer · Imaginie

03/2015 – 06/2016 (1 yr 3 mos)

- Built a distance-education platform end to end: Python/Django back end, AngularJS web client, and an Ionic mobile app; owned deployment and CI/CD (AWS, Docker, Ansible).

Software Engineer · Samba Tech

01/2010 – 02/2015 (5 yrs)

- Built an Online Video Platform (Java/Spring MVC) and a distance-education application (Python, Django, JavaScript); automated infrastructure, deployment pipelines, and monitoring (AWS, Nagios, Graphite, Fabric).

SUMMARY

Senior full-stack engineer with 15+ years shipping products end to end: React/Next.js front ends, TypeScript and Node.js services, PostgreSQL data models, and the AI agents behind them. Currently building AI products at Civic Technologies, where I also own the path to production on AWS. Deep background in identity, auth, and Web3.
